The CoE Starter Kit Setup Wizard & ALM

Setup Wizard - Inventory

Power Platform inventory, so knowledge about environments, apps, flows, chatbots in your tenant, is essential for the CoE Starter Kit to work. Inventory can come from either the [Power Platform Admin Center Data Export](#) or your own Azure Data Lake Storage (recommended) or can be gathered using cloud flows that crawl your tenant to store inventory in Dataverse.

Recommended

Data export

You can export Power Platform inventory and usage data directly into Azure Data Lake Storage to use with your organization's line-of-business scenarios. Having the data in your own data lake also means that you can store data for the durations specified in your organization's data retention policies. Because the data is provided by the admin center, this is high in performance and low in cost.

Note, this feature has to be configured from the Power Platform Admin Center before proceeding: [Set up data export for your tenant](#)

Select

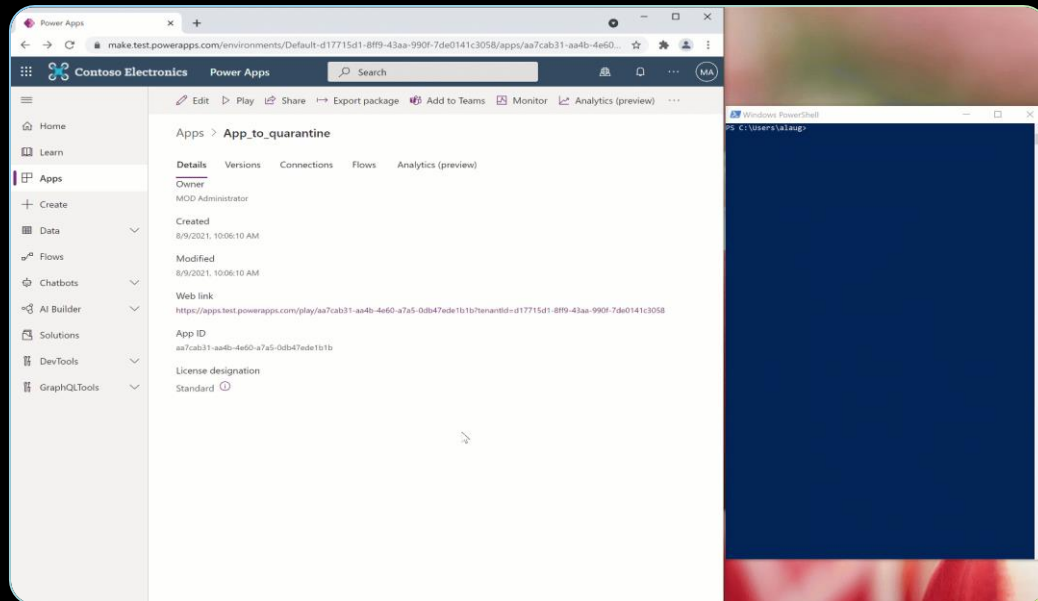

Cloud flows

Cloud flows use Power Platform admin connectors to query and crawl your tenant and store inventory and usage data in Dataverse tables. It is not recommended to use this approach, as this method can be high in cost to license the cloud flows and slow in performance.

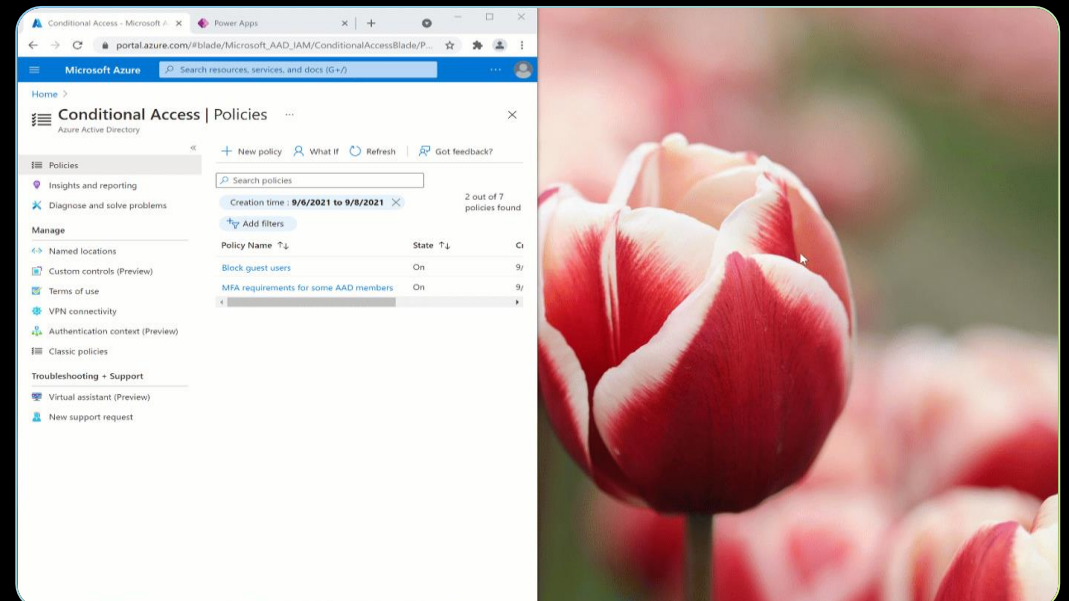

Select

Take action

Quarantine apps

Conditional Access policies

Prerequisite

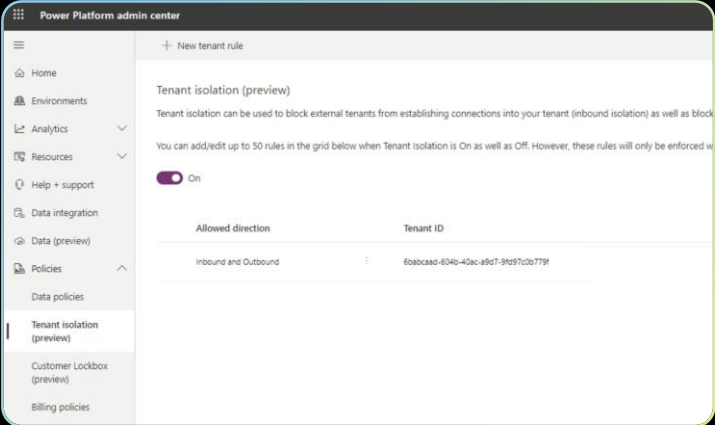

- Many permissions required
- Audit needs Azure AD Access
- ALM needs Azure DevOps access
- Power Apps Premium stand-alone license
- Power Automate Premium stand-alone license etc
